L03 Lab ITAI 1378

PhD. Patricia McManus
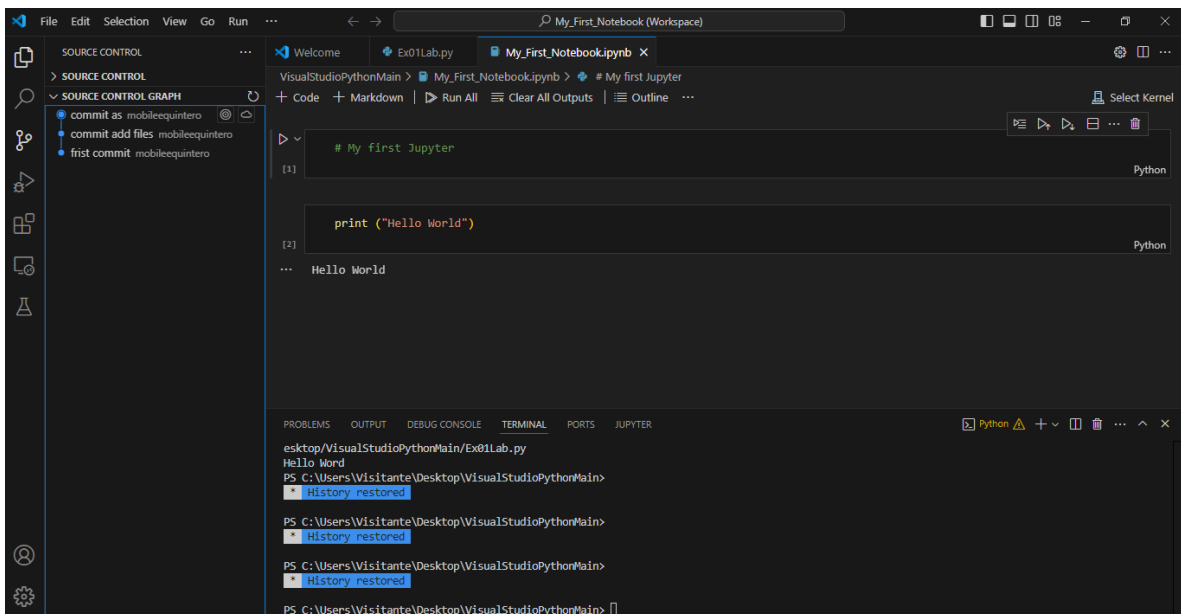

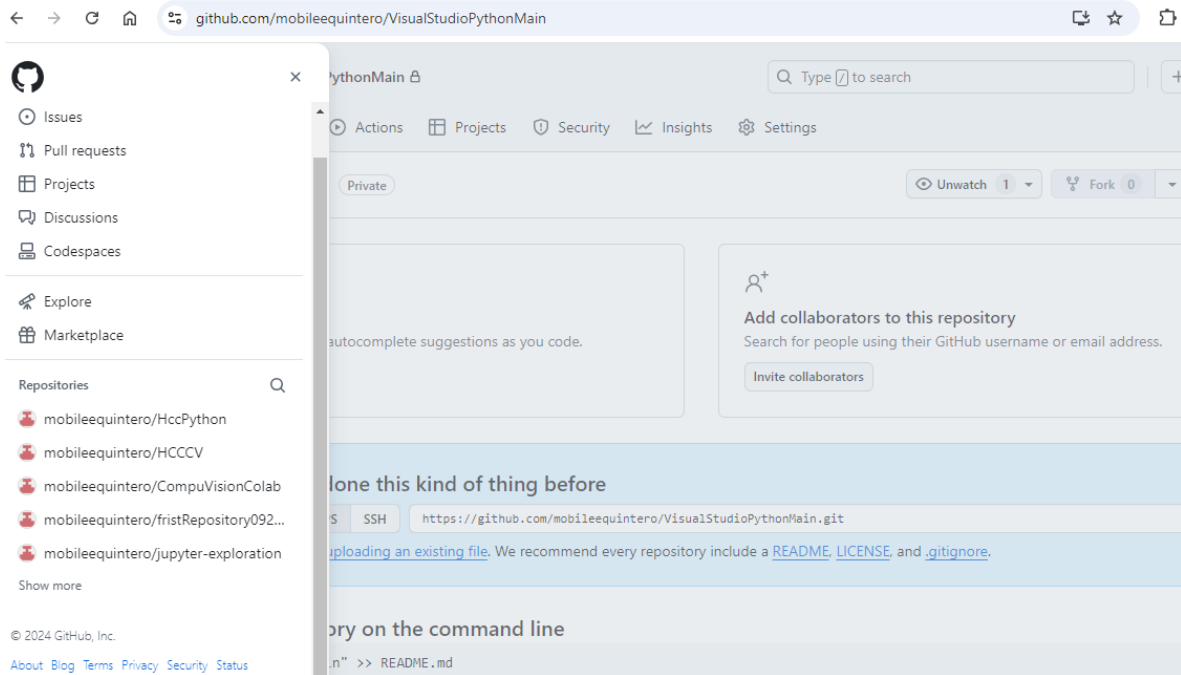

Compute Vision Artificial Intel-13788
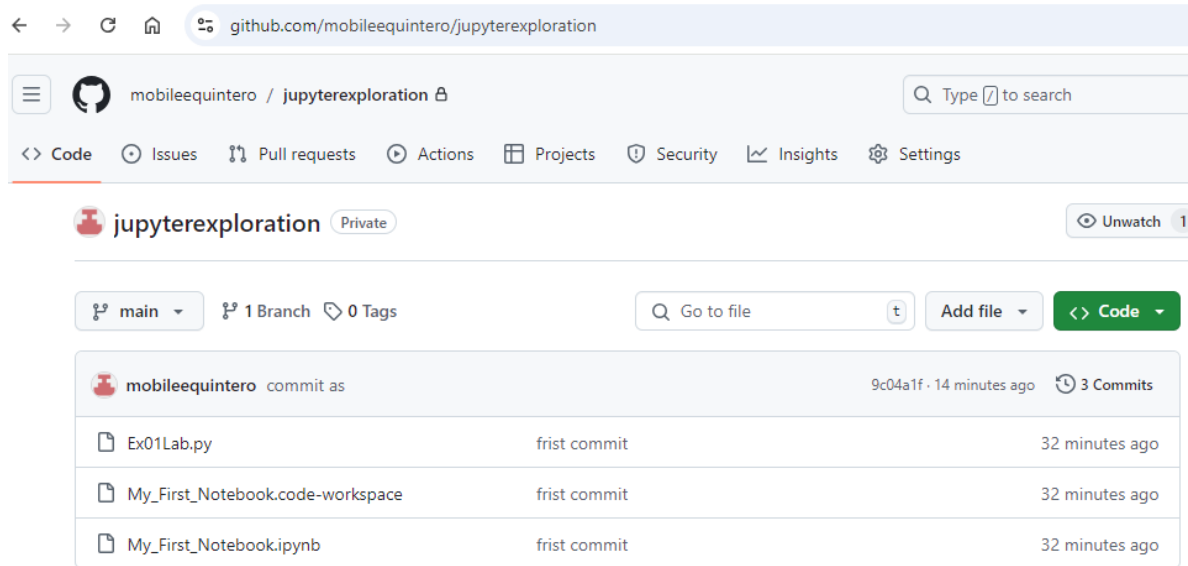

(ITAI-1388)

Student : Enrique Quintero

Github, Jupyter Notebook.

The process to install the environment was medium level, the first step was to install vs code, the second step was to create a new account on GitHub and download resources like Git and extension in Vss Code (Jupyter) and finally I made the first commit to synchronize.

Link to repository in GitHub.

I learned about the benefits of the many tools to develop the software solution. The power of GitHub, the flexibility of VSSCode, and many extensions that help us. Jupyter is an environment that allows you to use all the benefits of web platforms and is easy to use.

One challenge was switching repositories, other ways learning GitHub commands like commit, branch, etc. for install the tools watching many video on youtube and other one way was reading the directions.
